## PROFESSIONAL SUMMARY

Master of Computer Applications student (Jain University, 80%, 2024–2026) with hands-on experience in software design, development, and testing across AI-driven and full-stack applications. Proficient in Python, Java, and JavaScript with practical exposure to the complete software development lifecycle. Experienced in building scalable systems, integrating APIs, debugging complex issues, and collaborating in cross-functional team environments. Eager to apply academic and project-based knowledge in a real-world software engineering internship at Honeywell.

## EDUCATION

**Master of Computer Applications (MCA) — Currently Enrolled** — Jain (Deemed-to-be University), Bengaluru 2024 – 2026

CGPA: 8.1 | Relevant Coursework: Software Engineering, Data Structures & Algorithms, System Design, Software Project Management, Cloud Computing, Database Management Systems

**Bachelor of Computer Applications (BCA) — Cloud Technology & Information Security** — Jain (Deemed-to-be University), Bengaluru 2020 – 2023

CGPA: 7.4 | Focus: Cloud infrastructure, network security, distributed systems, software development

## PROJECTS

**Skill Sight — AI-based Resume Screening System** — Personal Project 2026

Tech Stack: Python, Machine Learning, REST APIs, JavaScript

- Designed and developed an AI-based application to parse resumes, compute job-description match scores, and rank candidates — covering the full software development lifecycle from requirement analysis to deployment.
- Built and tested automated resume generation and optimization features; performed unit testing and iterative debugging to ensure accuracy of AI-driven outputs.
- Authored software requirement specifications and technical documentation for the system, aligning with structured software engineering methodologies.
- Collaborated with peers to review code quality, identify bottlenecks, and iterate on design — simulating cross-functional development team workflows.

**TripMind — AI-based Travel Planning System** — Personal Project 2025

Tech Stack: Python, Node.js, Express.js, REST APIs, JavaScript

- Developed an AI-driven platform that generates personalized travel itineraries based on user preferences and budget constraints, applying data-driven algorithm design and software architecture principles.
- Designed scalable backend architecture using Node.js and Express.js; integrated multiple third-party APIs and performed end-to-end integration testing to validate system performance.
- Debugged and resolved frontend-backend communication issues, improving system reliability and response accuracy across varied user inputs.

**BlackSpades Esports Website** — Client Project 2024

Tech Stack: React.js, Three.js, JavaScript, CSS

- Delivered a production-grade, responsive web application using React.js and Three.js for an esports brand (live at bspesports.com), handling design, development, testing, and deployment independently.
- Participated in requirement gathering with the client, translated specifications into technical tasks, and ensured software quality through performance testing and UI validation.
- Optimized application performance and resolved cross-browser compatibility issues through systematic debugging and code reviews.

## TECHNICAL SKILLS

---

**Programming Languages:** Python, Java, JavaScript

**Frameworks & Libraries:** React.js, Node.js, Express.js, Three.js

**Databases:** MongoDB, Oracle DB

**Cloud & DevOps:** AWS, Git, GitHub

**Software Development:** SDLC, Agile Methodology, REST API Integration, Code Review, Unit Testing, Debugging

**Tools:** MS Excel, Google Sheets, VS Code

**Soft Skills:** Problem-solving, Analytical Thinking, Cross-functional Collaboration, Technical Documentation

## CERTIFICATIONS & PUBLICATIONS

---

**Paper Presentation:** Quantum Computing and Its Security — ICRDSTEM 2023

**Paper Submission:** Edge Computing in Oceanography — IIJSR Journal
